Identification of the Area

Name or Designation: Area 36: West Duwamish

Boundaries:

Northern: Harbor Island

Eastern: Harbor Island and Duwamish River to the Boeing Access Rd., then along Lake Washington at S. Graham St. South to SE 1-23-4 Perry St. and the Eastern boundary of Section 3-23-4 and 12-23-4 to 134th St. S.

Western: W. Marginal Way and Pacific Hwy S.

Southern: 134th St. S. in Tukwila & Martin Luther King Jr. WY S. to the Northern city limits of Renton.

Maps:

A general map of the area is included in this report. More detailed Assessor's maps are located on the 7th floor of the King County Administration Building.

Area Description:

Area 36 has been divided into eight neighborhoods spanning two municipalities as well as Unincorporated King County, and is generally distinguished by zoning jurisdictions and geographic characteristics.

Area 36-10

This is the Skyway neighborhood, within unincorporated King County. Commercial uses are predominantly for retail, service and apartments. The area has a comparatively lower level of commercial and retail use with few national retailers or service providers. Retail activity in Skyway remains low with elevated vacancies and changes in use associated with lower efficiency. Storefronts are typically occupied at nominal rent by small service providers, i.e. nail shops, sewing shops, thrift shops, imported goods stores, foreign video shops, etc. Sales, however, do indicate increases in commercial use and associated valuation relative to previous levels. This area was physically inspected during the 2004 revalue.

Area 36-15

This is Harbor Island which is a Federal "Superfund" site. Predominant use continues to change from heavy industrial to container shipping. The Port of Seattle is the only player active in this market. Redevelopment of Terminal 18 continues, with new rail and truck access built and the center of the island remediate for contamination. Increases were made to reflect surrounding market forces and increased pressure for close-in industrial sites. Almost all parcels within this neighborhood experience contamination associated liability and/or stigma, which negatively affect land and improvement values. This area was physically inspected during the 2006 revalue.

Area 36-20

This is the industrial area around Harbor Island and reflects non-"Superfund" land values. The proximity to Harbor Island and the Duwamish Waterway stigmatized these surrounding properties for many years, depressing their value. The Port is also a major influence here but not the only one. The land use is changing from industrial with minor retail to mostly Port related activities. This neighborhood contains the Port's largest and newest facility, APL's Terminal 5 as well as heavy industrial activity.

Area 36-40

This is the neighborhood of South Park which has a wide variety of industrial and warehouse use, with some retail. Sales were the most numerous within this neighborhood which supported some value adjustment, particularly in warehouses. Demand for close-in warehouse space continues to remain high with limited availability.

Area 36-50

This neighborhood is adjacent to neighborhood 70 to the South and Area 40 to the North. It includes Rainier Valley between Columbia City and Rainier Beach, commercial use within which is characterized by small, sole proprietorship businesses such as auto repair, convenience stores, nail shops and food service.

Area 36-70

Known as the Rainier Beach neighborhood, this area has been economically depressed in past years but is now showing signs of renewed market interest. A new retail complex has been developed for Safeway along with a Washington State Liquor Store; QFC finished a major grocery store remodel with Rite-Aid as a co-tenant. The former Lake Washington Shores housing project has been rebuilt, as well as the newly remodeled Rainier Beach Library. A new

office building has been constructed and the McDonald's was reconstructed after fire damage. All signs indicate continued revitalization. This area was also physically inspected during the 2005 revalue effort.

Area 36-80

This area is a small pocket of industrial use which is not contiguous with other industrial areas, as it is somewhat isolated by I-5 and the Boeing Access Road. The area is predominantly owner-occupied, but is considered comparable to the South Seattle industrial market. Accordingly, its rates are derived from South Park, South Seattle and Tukwila. This neighborhood was physically inspected during the 2003 revalue.

Area 36-90

This is an area of warehouses and industrial parks along the Duwamish River as it flows into Tukwila from South Park and terminates at 134th St. S. The neighborhood has newer industrial park type development as well as older industrial sites. The Sabey Corporation has developed the Intergate III High Tech Office/Industrial Park in what was the old Boeing military complex. New buildings are also being built on the site, which has expanded west, to Tukwila International Blvd and north to 128th St. Group Health has its new corporate headquarters here with additional room for expansion.

Preliminary Ratio Analysis

A Ratio Study was completed just prior to the application of the 2006 recommended values. This study benchmarks the current assessment level using 2005 posted values. The study was also repeated after the application of the 2006 recommended values. The results are included in the validation section of this report, showing improvement in the Coefficient of Dispersion (COD) from 14.36% to 11.85%, the weighted mean level from 95.2% to 97.3%, and the price related differential from .96 to .98.

Scope of Data

Land Value Data:

Sixteen sales within the area which occurred between 3/03 through 8/05 were given primary consideration for land valuation. These sales indicated a range of \$6.37 to \$17.50 per square foot for industrial zoning and \$3.91 to \$22.29 for commercial zoning. The majority of vacant land sales occurred within specific areas of neighborhoods 36-40 and 36-90, and localized adjustments were applied to reflect this activity. From a more generalized perspective however, area land values overall were considered to have increased for this Geo Area, based upon

examination of historical and current sales activity within this and surrounding areas of similar land use. West Duwamish is considered primarily an owner-user market as opposed to an investor's market. Accordingly, it is predominantly use-driven as opposed to investment-driven. Useable area, expansion potential, contamination control and industrial zoning are all factors that influence this market and impact corresponding valuation.

Improved Parcel Total Value Data:

Forty two improved sales which occurred between 1/03 and 12/05 were given primary consideration for establishing total value estimates. Twenty four additional sales of condominium moorage slips and properties reflecting changes in use were included on the Improvement Sales List, but not applied in ratio analysis as they were not considered representative of market sales activity for this Geo Area.

Sales information is obtained from excise tax affidavits and reviewed initially by the Accounting Division, Sales Identification Section. Information is then analyzed and investigated by the appraiser during the process of revaluation. All sales were verified if possible by calling either the purchaser or seller, inquiring in the field or calling the real estate agent. Characteristic data is also verified for sales if possible. Due to time constraints, interior inspections were limited. Sales are then listed in the "Sales Used" or "Sales Not Used" sections of this report. Additional information resides in the Assessor's procedure manual located in the Public Information area of the King County Administration Building.

Land Value

Land Sales, Analysis, Conclusions

As referenced above, useable area, utility (topography, wetland area, ect.) expansion potential, contamination control and zoning were factors that influenced corresponding valuation. Proximity and location were also considered. Given the large geographical dispersion of this area, along with a wide range of land characteristics within the various neighborhoods, corresponding valuation applied may vary substantially.

Below are zoning breakdowns for land value applied within the eight neighborhoods of West Duwamish. Zoning has been grouped into similar use due to the large number of classifications existing in neighborhoods resulting from location within Seattle, Tukwila, and unincorporated King County.

Land values within this neighborhood have shown more recent and substantial increases over previous levels due to market influences over the past several years. Comparative value in relation to competing neighborhoods, however, remains conservative.

Zoning	\$ Per Sq Ft Range or \$ Per Sq Ft					
CB, CPB (1), CBSO	\$8.00 - \$12.00					
NB (1), NC1-30 (1)	\$2.50 - \$7.00					
R-6P, R-8 (1), R-8P (3), R-8PS0	\$7.00					
R-12 (2), R-18, R-24, R-24P (1)	\$7.00					
R-48	\$7.00 - \$10.00					

Neighborhood 36-15

Land sales within this neighborhood are typically to the Port of Seattle, and are not considered reflective of market value because each transaction includes compensation for intangible services. This may reflect relocation expense, improvements to a new property and/or site, the purchase of business goodwill, premiums paid for takings, indemnification for contamination liability, or compensation for hardship. Financial value of these services cannot be easily isolated, so resulting sales are not considered reliable as market indications of value. The Port is also the only active participant in this market. Except for Todd Shipyards, Pendleton Flour Mills, a business park and some tank farms, Harbor Island is almost completely owned by the Port. The land is comparable to the Duwamish Waterway in that industrial and shipping uses are similar. Large parcels prevail in this area and water frontage is typically required. Nearby waterway and water access sales in neighborhoods 36-40 and 36-20 are also considered for purposes of valuation.

Zoning	\$ Per Sq Ft Range or \$ Per Sq Ft
IG1-U/85	\$6.00 - \$12.00
IG2-U/85, IG2-U/45 (1)	\$6.00 - \$14.00

There were three sales within this neighborhood over the last three years. The cleanup of the Western shore of the Duwamish Waterway for the APL Terminal 5 development has created market interest and we are now seeing more activity. Sales from surrounding neighborhoods with industrial use were also considered for purposes of valuation.

Zoning	\$ Per Sq Ft Range or \$ Per Sq Ft					
IB U/85	\$1.00 - \$16.00					
IG1 U/65(2), IG1 U/85, IG2 U/85	\$3.68 - \$16.00					
L-1 (1)	\$12.00					
SF 5000 (1), SF 7200– SF 9600 (1)	\$1.00 - \$13.00					

Neighborhood 36-40

Neighborhood 40 had five land sales, and includes both South Park industrial and commercial areas. Values tend to be higher towards the north due to proximity to the Seattle CBD.

Zoning	\$ Per Sq Ft Range or \$ Per Sq Ft
C1/40 (3), C2/40, C2/65	\$11.00 - \$14.00

L-1, L-2 (3), L-3, MR	\$10.00 - \$16.00					
R6P (1), SF 5000, SF 7200, 9600 (2)	\$4.00 - \$14.00					

Neighborhood 36-80

Zoning	\$ Per Sq Ft Range or \$ Per Sq Ft
LI (3), C/LI (1), C2-65, RCC (2)	\$4.00 - \$12.00
IB U/65 (1), IG2 U/65, IG2 U/85	\$4.00 - \$12.00
MIC/H	\$1.00 - \$10.00
HDR	\$1.00 - \$12.00
LDR (1)	\$8.00
SF5000 - 7200	\$4.00 - \$6.00

Neighborhoods 36-50, 36-70, and 36-80 continue to see activity resulting from the Central Puget Sound Regional Transit Authority as construction progresses of the light rail system. Whereas land valuation within these neighborhoods was adjusted upward resulting from general market trends, no specific adjustment was applied to the light rail corridor to reflect development impact either positively or negatively, as no clear market indication appears evident at this time.

Four sales occurred in neighborhood 90 with C/LI (Commercial/Light Industrial) and MIC/L (Manufacturing Industrial Center/Light) zoning. The area has a high-end industrial park with class "A" office space, a newly refurbished high tech park, a newly constructed Group Health Campus, and recent construction of DSHS and Federal Homeland Security office buildings. All are a reflection of continued market interest in support of development within relatively close proximity to the Seattle CBD.

Zoning	\$ Per Sq Ft Range or \$ Per Sq Ft				
C/LI, NCC (1), RCC (2)	\$4.00 - \$20.00				
MIC/H, MIC/L, HI (1)	\$1.25 - \$16.00				
LDR, MDR (1), R-18	\$2.00 - \$12.00				

The total assessed land value in Area 36 for the 2005 assessment year was \$1,075,925,900. The 2006 total recommended assessed land value is \$1,241,182,600. Application of these recommended values for the 2006 assessment year (taxes payable in 2007) results in an overall increase of 15.36 %.

A list of vacant sales used and those considered not reflective of market are also included in the following sections.

Sales comparison approach model description

Generally speaking, this geographic area is comprised predominantly of owner-occupied warehouses. These warehouses are used in distribution, light manufacturing, storage, shop area and open office space. A Land to Building Ratio of 2:1 is applied in approximately 16% of the improved properties. The ratio maximizes highest and best use for this type of property as reflected by the market. Age and utility are a major influence on value for a given use and are also reflected in the valuation process. Quality tends to the low side and improvement age ranges from 1900 to the present, in a fairly even distribution.

Between January 1 of 2003 and December 31 of 2005, sales have ranged from \$44 to \$200 per sq. ft. for warehouse types, \$61 to \$117 per sq. ft. for office buildings and \$117 to \$190 per sq. ft. for retail. At the low end were older properties offering less utility to the market. Warehouse buildings are generally of poorer quality and condition in comparison with the East side of the Duwamish (Area 35). At the high end are newer properties that offer greater utility, efficiency, quality of construction and appearance to the market. The retail and office markets are not of great significance in neighborhoods 15, 20, 40 and 80, as they tend to be secondary and support the warehouse type uses. The retail areas, Neighborhoods 10, 50 and 70, tend to be older construction with minimal updating. The vast majority of the businesses are small sole proprietorships with a scarcity of national chains. There are many single-street, three to six block long retail areas, in South Park, Rainier Beach and Skyway. These areas tend towards relatively higher vacancy and lower rents due to the absence of primary retail activity, and offer a more limited mix of products and services to the customer base.

Sales in neighborhoods 36-40 and 36-50 were the most numerous, and sales within the other neighborhoods were not representative of all property types. Sales were used in support of income, cost and market approaches to value.

Cost approach model description

Cost estimates are automatically calculated via the Marshall & Swift cost modeling system. Depreciation was based on studies completed by Marshall & Swift Valuation Service. Cost estimates were adjusted to both the western region and the Seattle area. Marshall & Swift cost calculations are then automatically calibrated to the data in place within the Real Property Application. Cost estimates were relied upon in most instances of exempt properties, to include schools, churches, fire stations and public utility buildings. Cost estimates also serve as a value indication for newly constructed projects.

Cost calibration

The Marshall & Swift cost modeling system built in to the Real Property Application is calibrated to the region and the Seattle area.

Income capitalization approach model description

Three basic models were developed for income capitalization; those being retail, office and warehouse. Income tables were developed and applied to the population.

Income approach calibration

All models were calibrated after setting base rents by using adjustments based on size, effective age, construction class and quality as recorded in the Assessor's records. The majority of the properties in this area were valued utilizing the income approach. Income tables were developed from market surveys and studies and subsequently applied to property data. Capitalization rates and expenses were also extracted from the market. Approximately 16% of the improved properties required an excess land calculation above a 2:1 land to building ratio. The income model assumes a land to building ratio based on the market. The calculation is performed by calculating the income value, then taking all land area in excess of the ratio valued at the market rate, and adding it to the total value.

The predominant property type is warehouse, which includes distribution, light industrial and storage warehouses, storage buildings of all types, service buildings, utility buildings and machine shops. Rents are lowest for older properties in poor condition. Rents range typically from \$3.50/sq ft for poor quality, to \$4.50 to \$6.50/sq ft and higher for average to good quality buildings of all ages. Warehouses with excellent building quality are non-existent and those of good quality are rare. The vast majority of rents fall within the average to low-cost classifications. Capitalization rates for these properties also reflect investment risk, being higher for older, poorer quality buildings (9%) and lower for newer, better quality (7%).

Income tables were developed to represent each neighborhood within in the area for purposes of direct income capitalization. Tables created were for all warehouse, light industrial, service, storage, shop, retail, restaurant/tavern and office uses. A "No Income" table was also created for those properties where the income approach is not considered applicable such as: exempt properties including schools, fire stations, churches and public utility buildings and other special use properties where income information is not available.

Reconciliation and or validation study of calibrated value models including ratio study of hold out samples.

All parcels were individually reviewed by the area appraiser for correctness of the model application before a final value is selected. Each appraiser can adjust any or all of the factors used to establish value by the model. The market rents as established by the income model were used as a guide in establishing the market rental rates used. The market rental rates applied vary somewhat but fall within an acceptable range of variation from the established guideline. Final value selects were reviewed by the Senior Appraiser before posting. With application of the recommended values, the standard statistical measures for valuation performance were considered to be slightly improved.

Model Validation

Total Value Conclusions, Recommendations and Validation:

Appraiser judgment prevails in all decisions regarding individual parcel valuation. Each parcel is field reviewed and a value selected based on general and specific data pertaining to the parcel, the neighborhood, and the market. The Appraiser determines which available value estimate may be appropriate and may adjust of particular characteristics and conditions as they occur in the valuation area.

With application of the total Value Model described above, results indicate an increase in equity among properties, as evidenced by movement of the COD from 14.36% to 11.85%, the weighted mean evel from 95.2% to 97.3%, and the price related differential from .96 to .98. These standard statistical measures of valuation performance all remain within IAAO guidelines and are presented both in the Executive Summary and in the 2005 and 2006 Ratio Analysis charts included in this report.

The total assessed value for Area 36 for the 2005 assessment year was \$1,925,088,541 and the recommended values for the 2006 assessment year total \$2,087,797,695. Application of these recommended values for the 2006 assessment year (taxes payable in 2007) results in a total increase from the 2005 assessment of 8.45 % for all of Area 36.

Note: More details and information regarding aspects of the valuations and the report are retained in the working files and folios kept in the appropriate district office.
